

# Integrated Lecture Management: Final Demo

Cedric Reginster, Bjoern Mosler

IAM

May 23, 2011

# What we had planned

## Milestone 2

Integration with Google Calendar and Google Maps.

# What we achieved

- Integration with Google Maps (only works if locations are entered in EVUB)
- Partial integration with default calendar on the handset (if included by vendor)
- Being frustrated with state of Google Calendar APIs for Android and EVUB

# Problems: Google APIs

There are two APIs from Google for accessing their services: **google-api-java-client** and **gdata-java-client**.

## **google-api-java-client**

- successor to **gdata-java-client**
- has no calendar API as of now
- has Android support

## **gdata-java-client**

- has calendar support
- no Android integration (i.e. for authentication) and is not supported officially for Android
- is deprecated

# Problems: EVUB

- Non-standard Date/Time formats, i.e. DD.MM.YYYY  $\Rightarrow$  parsing.....
- Time and date information are stored in separate XML nodes,  
< *date\_start* >, < *time\_start* >
- Location information not always provided
- No distinction between single and recurring events

# Who did what?

## Cédric

- Integration with Google Maps
- Modify parser to record multiple events per lecture

## Björn

- Modify database to record multiple events per lecture
- Trying to integrate with Google Calendar and Android Calendar

This is it.
